

# GDPR compliance with ARIS

## Technical terms model with GDPR content

When you get started with GDPR compliance, you first need to understand the legislation and add the requirements to your ARIS Repository.

An out-of-the-box technical terms model in ARIS helps you to derive your compliance requirements, define risks and controls and assign responsibilities.

## Surveys for PA documentation (PAD)

- Data protection officers can describe the processing activities in more detail and define **questionnaires** to collect missing GDPR-relevant information
- PAD surveys help to collect and evaluate answers from stakeholders
- Survey intelligence reports** can be used to evaluate a score that helps the data protection officer to define further measures

## Data protection impact assessments (DPIAs)

- For critical Processing Activities (PAs) with a high score, you can perform more detailed surveys for **PA Qualification (PAQ)** and risk assessments
- Risk assessments help to identify the need for DPIAs for PA risks with **high probability and/or high occurrence frequency**
- DPIAs should be performed for PAs with high-risk probability according to the PAQ and/or risk assessment result
- Run DPIA workshops to evaluate the necessity and proportionality in relation to the purpose, and to document existing mechanisms for data protection connections.

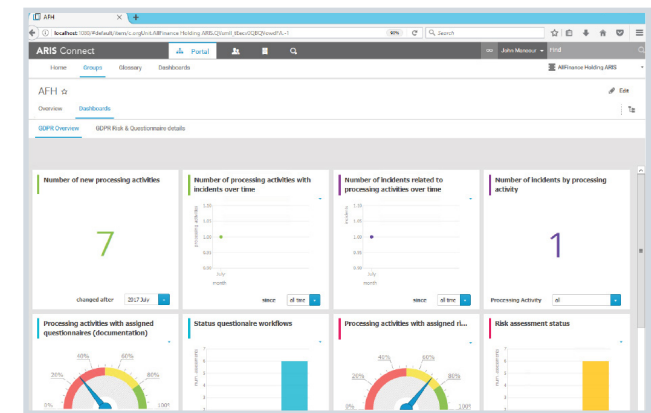

## Record of processing activities (ROPA)

- It is required that you maintain a **ROPA** including all data controllers and data processors of privacy data
- When **Processing Activities (PAs)** are equivalent to business processes, you can simply reuse this data from the ARIS Repository and add more PA details, or you can add them as new information to the ROPA.
- The ARIS fact sheet presents the ROPA in an easy-to-use table

Name	Description	Results	Outputs	Controls	Processors	IT systems	Processing activity details
Special Monitor Program	Special Monitor Program has employees to define their employees are identified as candidates for special	Contract Data	Shareholder	ARIS	Marketing		Special Monitor Program
Marketing Communications		Order order					Marketing Communications
Performance Management	Purpose of Performance Management process is to evaluate the performance of employees	Employee data		ARIS	Finance & controlling	Infoby	Performance Management
Sales order processing (ARIS)	Sales order processing has the purpose to define the sales process	Order data		ARIS	Sales	A-PLAN PRO-VERBA	Sales order processing (ARIS)

## GDPR-tailored dashboards

- GDPR-tailored dashboards help the Data Protection Officer (DPO) to be up to date about the current situation and to react quickly in case of any issues or incidents.
- Via the dashboard, the DPO has direct access to the affected elements.

## GDPR accelerators

- Filters based on conventions enable you to document PAs and GDPR-relevant qualification of application systems, processes, and data
- Classification of data with the help of data privacy attributes
- Method extensions also include risk assignment

## GDPR management report

Finally, after all the work is done, the data protection officer needs a reliable tool to easily prove GDPR compliance by a click on a button.

Management reports for GDPR make this an easy exercise.

## Your way to GDPR compliance

### PREPARE your organization

Run **readiness survey**

**Set up** data, IT & process inventories

Build **Records of Processing Activities (ROPA)**

**Enrich Processing Activities (PA)** information

Requirements evaluated  
ROPA report available

### EVALUATE processing activities

**Qualify PAs** for Data Protection Impact Assessment (DPIA)

**Assess PA risks**

**Run DPIA** for high-risk PAs

**Evaluate** need for improvement measures

High-risk PAs identified  
Risk management report available

### IMPROVE your organization

**Mitigate GDPR risk**  
**Implement or adapt** processes & systems

**Establish GDPR compliance policies** in the organization

**Implement** incident management **system**

Risk mitigation measures implemented  
Incident management system available

### ENSURE compliance

**Test** internal controls & risk mitigation measures

Sign off business organization hierarchies

Plan & execute internal **GDPR audits**

GDPR management system implemented

## ABOUT SOFTWARE AG

Software AG simplifies the connected world. Founded in 1969, it helps deliver the experiences that employees, partners and customers now expect. Its technology creates the digital backbone that integrates applications, devices, data and clouds; empowers streamlined processes; and connects "things" like sensors, devices and machines. It helps 10,000+ organizations to become a truly connected enterprise and make smarter decisions, faster. The company has more than 5,000 employees across more than 70 countries and annual revenue of over €950 million.
