ARIS

ARIS 10 SR27
Release Notes (Features)

ARIS 10 SR27 feature	Feature description
ARIS Enterprise	
ARIS Enterprise – Designer	
AI-Based Process Model Drafts	When creating process models, the ARIS AI Companion provides designers with descriptions (summaries) for the overall model and its individual tasks or functions. Moreover, to enhance the user experience, users can now provide feedback for the generated models.
ARIS Enterprise – Server/Enterprise Server	
Move an ARIS Tenant to Another Environment and Keep All Document Links Working	Alias technology for ADS enables seamless migration of an ARIS database including linked ADS documents, to a different environment or tenant. The links to ADS documents remain functional without any additional configuration. *Based on customer idea ARISDS-I-17*
ARIS AI Companion in Enterprise Public Cloud	The ARIS AI Companion is available in the Enterprise public cloud.
BPA Gallery Now Supports Distribution of Reports	Expanded the Gallery content to encompass reports scripts, ARCM reports, macros, profiles and rule types as a next step towards delivering a solid set of highly valuable assets/accelerators.
ARIS Help & Documentation Made Available Freely on Web Page	Documentation of ARIS is made available freely on a web page, as HTML and as PDFs for download.
ARIS Enterprise – Viewer	
Modernized Edit Toolbar in Portal to Fit New Redesigned Factsheets	Updates the "Edit" button and toolbars in the ARIS portal to fit the new portal design. This streamlines the look and feel and gives quick access and focus to central functions of a portal user.
Activation/Deactivation of Model Overview Frame in the ARIS Portal	Every user can decide for themselves if the model overview frame at the bottom right corner of the Diagram view in the ARIS portal is visible or not. *Based on customer idea ARISRPA-I-51*
Search in Actively Viewed Published Repository as Default Setting	By default, portal search finds results in the published repository that the user is currently viewing with an option to search all. This allows users to quickly find the information they need without having to manually select the correct repository. Users can also choose to search all published repositories. *Based on customer idea ARISSE-I-48*
Enhanced ARIS Portal Search Results Details Pane	In the details pane of ARIS portal search, the complete group path and person responsible are shown by default setting. *Based on customer feedback gathered at IUG 2024*

ARIS 10 SR27
Release Notes (Features)

ARIS 10 SR27 feature	Feature description
Semantic Search and AI Insights	ARIS users with the Companion license assigned can use the semantic search and the Companion in the portal. Semantic search leverages natural language processing to identify synonyms and related concepts, enabling users to uncover hidden connections within their data. Additionally, the AI companion acts as an intelligent assistant, providing users with the ability to ask questions and receive informative responses. Admins can select for which published databases the companion should be activated.
"One Click" Experience Navigating the ARIS Portal	Enables a "one click" user experience when navigating the ARIS portal (no more double-clicking required). *Based on customer ideas ARISV-I-56 and ARISSE-I-83*
ARIS Enterprise – Viewer Pro	
Create Dashboard Link from Spreadsheets	Like the rich client, we provide users with the ability to create dashboards directly from selected spreadsheet data. *Based on customer idea ARISD-I-380*
ARIS 3rd Party Integration	
Improved Documentation of the REST API	Designers and admins now benefit from the improved documentation of our REST API.
ARIS Risk & Compliance	
Single Place for Administration: Integrate Risk and Compliance Administration Activities	Integration of management of server tasks (generate, update and check) into Administration, including server task monitoring. Improved usability, faster and easier work.
Risk and Compliance Self-Service Configuration for Enumeration Attributes	Enable configuration of enumeration attributes for Risk and Compliance within ARIS Administration. Renaming to adapt to customers end user acceptance. This helps to save time and costs, reduces external consulting efforts and increases flexibility.
ARIS for SAP® Solutions	
Support of SAP Solution Manager Attribute Business Process Test in ARIS	Include attribute "classification of test cases" into synchronization to SAP Solution Manager. *Based on customer idea ARISRPA-I-131*
Enable Export of EPC Models as Solution Process Flows in BPMN Format into SAP Cloud ALM	ARIS users can now export models in both EPC and BPMN formats for import in SAP Cloud ALM as solution process flows. Since the SAP API only supports BPMN format, EPC models are automatically converted to BPMN during export. This feature provides users with greater flexibility and freedom in choosing their preferred modeling format.
Integration of Synchronization Between ARIS and SAP Cloud ALM into Process Governance	Synchronization of ARIS content with SAP Cloud ALM within governance processes is an important step in automation scenarios to ensure governance quality.
Manage SAP® Systems to be Used to Run Executables in the Web	Administration of SAP® systems used to run executables within ARIS portal is now available in the web. Improved user experience, one single point of work for administrators.

ARIS 10 SR27 feature	Feature description
ARIS Process Mining	
Enhanced Model Overlay: Introducing EPC Support and Further Enhancements	The new feature adds support for EPC and further enhancements for the Process Mining overlay. The EPC overlay enables users to combine process mining data with their EPC models, allowing for direct visualization and analysis of KPIs on process models. In addition, edges in the overlay will now reflect the metrics by changes in their size making it easy to identify larger or smaller values. With this we adapted the quick filter to stay in sync with the global filter. The benefits of this new feature include improved decision-making, a deeper understanding of processes to process models and mining data, and a more comprehensive analysis that helps identify optimization opportunities. *Based on customer ideas ARISPMIYU-I-219 and ARISPMIYU-I-259*
Multi-Model Reference for Enhanced Conformance Checking	The Multi-Model Conformance Check feature significantly enhances the conformance checks process by using multiple models based on specific data attributes. Process mining analysts can now easily select relevant process data for each conformance check, allowing for differentiation among variant models tailored to different countries, regions or units. This targeted approach highlights only applicable conformance issues specific to each model. By leveraging existing segmentation, this feature supports a well-organized model repository, avoiding the need to merge everything into one large model. It empowers organizations to verify process conformity against various predefined models or standards, ensuring comprehensive validation across multiple guidelines. *Based on customer ideas ARISPMIYU-I-59 and ARISPMIYU-I-106*
Companion Answers Business Question with Corresponding App Component	ARIS Companion has been enhanced for quick and ad-hoc insights. Building on its existing guidance, and best practices reference, this powerful tool now enables users to ask data-related questions and receive detailed insights through relevant visualizations. This update empowers business users to access insights on-the-go, even before formal analytics visualizations are established, and supports any ad-hoc analytical need.
Seamlessly Extract Data from Cloud Applications Using REST APIs	Easily extract and map your data with the new HTTP extraction functionality. No longer reliant on external tools, you can now define extraction rules and map data to required fields for process mining. This feature offers flexible data extraction tailored to your needs through configurable API endpoints.
Upgrade Your Dashboards with the New Image Component	Elevate your dashboards with the new Image Component! Seamlessly integrate your corporate identity, reference key images for analytics, or add creative visuals to make your dashboards more engaging and visually appealing. Transform your data presentation with stunning, customized imagery. *Based on customer idea ARISPMIYU-I-81*
Stay Informed: Notifications for Shared Bookmarks	This feature now alerts users to newly shared bookmarks, including both public and private shares, ensuring they stay informed and never miss important information.
Enhanced Scripted Measures	We've now enabled calculations across cases. With these enhanced scripted measures, you can easily perform complex calculations over various aggregations across cases, uncovering deeper insights and facilitating benchmarking.
